Target

The majority of policy holders did not claim insurance, these were as can be expected at 88.19% while those that claimed were 11.81%.

The Modelling strategy

- We shall have two datasets, one with all the columns that had few blanks, we shall make a model using these and see how the model performs.
- We shall drop the rows with blanks and train a model that uses the full variables to see the performance
- We shall create an imputed dataset to see how this performs as well

For each of these strategies we shall try to balance the data using over and under sampling which means we shall have a total of 6 cleaned datasets.
